CONVEYOR BELTS

*We have a wide range of **Moving belts**, between which those of the range emphasize CL and the range JR, the gyratory tapes, and the tapes with tripper of unload for collection of bulk materials.*

Moving belts Type CL:

They are tapes of light type, constructed by means of UPN's profiles, which present a frame of limited dimensions.

The tape range CL consists of bandwidths of 500, 600, 650 and 800 mm.

Moving belts Type JR:

The frame of these tapes is of type lattice, which provides a great hardness to him and allows to leave the great vain one between supports.

The rollers are mounted on stations, which allow to correct the possible detour of the band. This type of tapes are equipped with his corresponding gangplank of visit.

The construction of the sections is modular to facilitate the transport and the assembly. This range can equip bands of 500, 600, 650, 800, 1000, 1200 and 1600 mm.
