FEEDERS OF STRIP AB SERIES

*The **Feeders of Band** are machines that generally are placed under hopper. His mission is to provide a homogeneous supply of the materials. Specially they are indicated for the supply of sands, gravels and clayey materials.*

Our Feeders of Band are formed by a robust chassis. The band rests on rollers, placed planes or in dug-out, according to the material to treating.

*We make the **Feeders of Band**, in bandwidths of 500, 600, 650, 800,1000, 1200 mm, and the different length depending on the needs of every installation, always adapting to every need.*
